Diploma in Information Technology – Expected 2027

Vaal University of Technology

Experience

Varsity Friend | Web Application | [Visit Site Here](#)

Developed a web-based platform that helps South African students find university admission opportunities and bursary funding in one centralized system. The platform provides university application dates, fees, bursary requirements, funding information, and direct application links to official websites. It also includes an assisted application service that allows students to submit documents and request support with applications.

Tech Stack | HTML | CSS | FormSubmit | GitHub

SmartAttend | Java Desktop Application | [Visit Github Here](#)

Developed an attendance management system designed to streamline student attendance tracking and record management. The system allows administrators to manage student information, monitor attendance records, and maintain accurate attendance data through a centralized database. The project focused on improving efficiency, reducing manual record keeping, and ensuring data accuracy.

Tech Stack | Java | Swing | JDBC | MySQL | Git | GitHub

UniSwap | Web Application | [Visit Site Here](#)

Built a peer-to-peer marketplace for university students, allowing users to buy and sell products within the campus community. Implemented product listings, item browsing, user interactions, and responsive interfaces to create an accessible and user-friendly online marketplace. The platform promotes affordable student trading and strengthens campus commerce.
